

The Command and Control of the Grand Armee: Napoleon as Organizational Designer

The purpose of this book is to investigate Napoleon Bonapartes command and control of the Grand Armee through the lens of organizational design. Napoleons methodology behind the design of the Grand Armee is analyzed using modern principles of organizational design. The structure that Napoleon created within his organizational design was a vast information network that served as the framework for a highly effective command and control system. This command and control network allowed Napoleon to dominate a war with his enemies within the information domain. The Grand Armee transited the European countryside with lightning speed as Napoleon out maneuvered his enemies. Napoleons dominance was a direct result of his organizational masterpiece that was the Grand Armee. From an organizational design perspective, Napoleons methodology applied the ideas of others and exploited existing technology to affect his design. The reorganization of the military corps became one of the most important transformations made by Napoleon. The army corps was considered a key component in Napoleons strategic deployments. The command and control system he engineered for his corps was essential in the Napoleonic philosophy to march divided and fight united.
